

Dataset category ● Multi-method (ERT, seismic and more)
▲ Seismic only ■ Survey format not yet identified

Boundaries: Natural Earth · sites: WYCEHG compilation, positions approximate

Geomorphology · Depth to unweathered bedrock, metres below ground
How thick is the weathered zone, and where is fresh rock?

Hydrology · Subsurface water storage, mm of water
How much water is stored in the subsurface, and how did it change between surveys?

Forest ecology · Root-accessible water capacity, mm
How much water can roots reach at this site?

Biogeochemistry · Reactive-zone thickness, metres
How thick is the reactive zone, and where does it stay saturated?

Natural hazards · Regolith thickness and a continuity flag, metres
Is regolith thickness laterally continuous across this slope?

Design preview. Values are illustrative and no computation is performed.
